# Instruction Manual

## AME Intl. Part #11065

### TO OPERATE TOOL

1. Jack the tractor up until the duals are clear of the ground. Place jack stands under the axle of the tractor and lower the tractor onto the jack stands or cribbing.

### DO NOT WORK ON TIRE/WHEEL ASSEMBLY WITHOUT JACK STANDS OR APPROVED CRIBBING.

2. Deflate outside dual and evacuate any ballast that might remain in the tire.
3. Place the 11065 tool between the duals. The 11065 tool only needs 4 1/2" of space to operate and extends up to 12". Place the drive arm (A) faced toward the inside bead of the outside dual, place the tip of the tool against the side wall of the tire as close to the rim lip as possible.

### CAUTION: DO NOT PUT THE DRIVE SPADE (A) OF THE TOOL AGAINST THE RIM.

4. Apply a small amount of pressure with the hydraulic pump, just enough to allow the (B) lip arm of the tool to contact the rim flange of the inside dual.

### CAUTION: USE THE LONG HANDLE TO AVOID PINCH POINTS AND RELEASING COMPONENTS DURING OPERATION AND RETRACTION.

5. Keep applying pressure with the hydraulic pump until the bead separates from the rim.
6. Rotate the tire in small increments and repeat steps # 3, # 4, and # 5 until the bead is separated from the rim.
