- Weight: 29 lbs (13.2 kg)

THE INDUSTRY'S TOP JACK JUST GOT BETTER

As a part of AME's continuous improvement culture, we've taken a best selling product and made it even more user friendly.

ORIGINAL

Durability Improvements:

- Tighter fit between the piston and wear bands implemented to reduce deflection during side load conditions.
- Hard Coating added to the piston bearing surfaces to reduce the amount of scoring if a cylinder strike still happens during side loaded conditions.
- Tighter interference fit between the gland and cylinder walls combines with improved wear band fit to reduce side-load deflection even more.
- Reminder: while this product improvement reduces incidence of side load it is still recommended that jacks are used for lifting only. It is best practice to use jack stands or cribbing to support the load.
