ATV TIRE REPAIR KIT

Gets you back on the TRAIL quickly!

Safety Seal's ATV Tire Repair Kit is designed for useability off road. The watertight package is small (7 3/8" x 1 5/8") for easy storage.

It will even float if it gets loose in water. The unique insertion tool uses a CO2 cartridge for the handle to minimize space. The two CO2 cartridges will fill a typical ATV tire to operating pressure.

The entire process for repairing a tire takes only a few minutes and, since it's Safety Seal, you know the repair will work. Unlike most other brands, we coat each thread individually to ensure complete saturation and a strong seal.

Watertight Container Holds:

- 6 Safety Seal Repairs
- 2 CO2 Cartridges
- Repair Insertion Needle
- Inflator Adaptor
- Full Instructions

When you're miles from home with a flat, turn to the brand you can trust, Safety Seal.
